Our Advantages

Aluminum Alloy

Smooth Surface

Electric Control

Heat Insulation

Wind Resistant

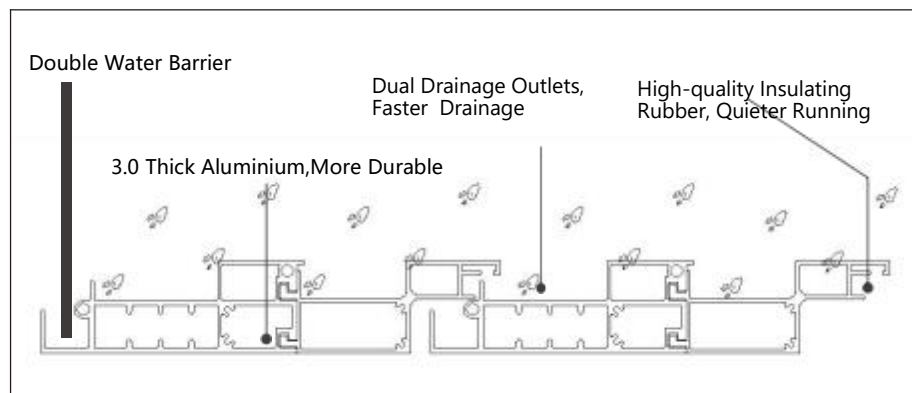

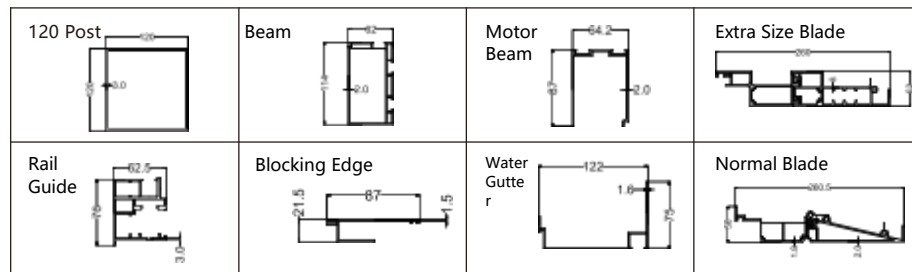

Stacked Design

*The product is primarily made of aluminum alloy, which is highly resistant to corrosion, durable, and not prone to deformation.

*The hollow louvers can provide shading and heat insulation, while the triple-layer waterproof design offers superior rain protection.

*The latest stackable blade design maximizes the view and enhances ventilation as desired.

*The structure combining aluminum alloy with steel frames ensures the pergola's stability and sturdiness. Suitable for various high-end locations such as villa gardens, swimming pools, terraces, luxury clubs, shopping malls, etc.

Spacious

This type of retractable flip-board waterproof louvre pavilion offers a large space, not only providing people with a larger outdoor resting area but also the stacked blades allow for a wider field of view.

Flexible DIY Combination

Around the PERGOLA, you can also install glass doors, louvered doors, windproof roller blinds, lift-up windows, aluminum alloy outdoor cabinets, aluminum screens, and other compatible products.

For All Weather

The retractable flip-board waterproof louvre PERGOLA is constructed with an aluminum frame and double-layer blades; it features high hardness, corrosion resistance, sturdiness, durability, rain protection, and sun protection.

Smart Motorized

The self-developed motor is equipped with automatic learning capabilities, allowing it to adjust its travel automatically without manual travel adjustments. It also features an obstacle detection stop function, making the operation safer.

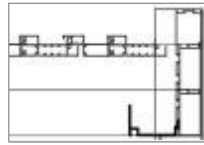

More High-End

The exquisitely designed outdoor retractable louvered waterproof PERGOLA, with its superior shading, unique mechanism, elegant geometric shapes, brings a high-end personalized elegance to outdoor spaces, highlighting distinguished taste.

Motorized Retractable Pergola

WHEN CLOSED

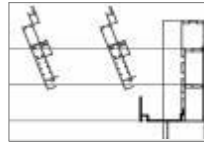

Compared to traditional PERGOLA, this model presents a more sleek and generous appearance, also exuding a more upscale and motorized advanced vibe.

ON OPENING

The blades are angled for optimal ventilation.

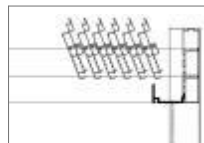

The blades can be opened or folded, offering a broader view and enhanced airflow, overcoming the traditional limitations of enclosed sunshades.

WHEN FLODED

When folded, the blades automatically move to a fixed position.

Besides the conventional shading function of large louvers, they can also fold and retract to one side, not occupying any space at all.

Constructed with high-strength aluminum alloy, our sunrooms are designed to endure harsh winter conditions. The frame ensures stability and wind resistance, while the blades feature drainage channels to prevent indoor leaks. This robust design stands firm against blizzards, strong winds, and heavy rains, ensuring the structure's integrity without the worry of collapse due to all harsh weather.

Snowproof

Wind Shielding

Rain Protection.

e · Garden

VS

Other Pergola

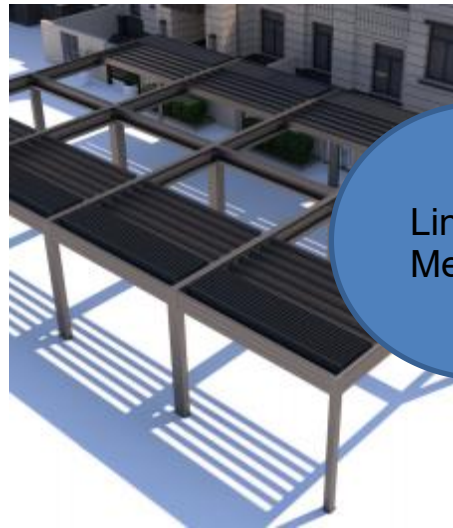

Smart Motor

The motor automatically learns its travel path, requiring no adjustment. It stops upon encountering any obstacles, ensuring safety without worry.

Most motors on the market require adjustment of their travel path, which is time-consuming, and lack the feature of stopping immediately upon encountering obstacles.

Linkage Method

The opening and closing methods are diverse. When closed, it provides protection against rain, snow, and falling objects.

The linkage method is simple, resulting in a limited field of view.

When opened, it allows for stargazing, moon viewing, and sunbathing.

e · Garden

VS

Other Pergola

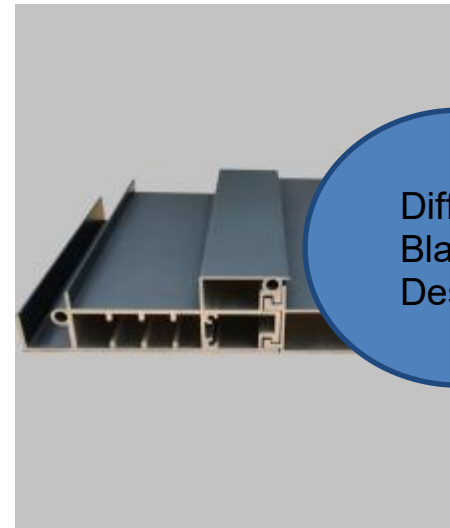

Installation methods

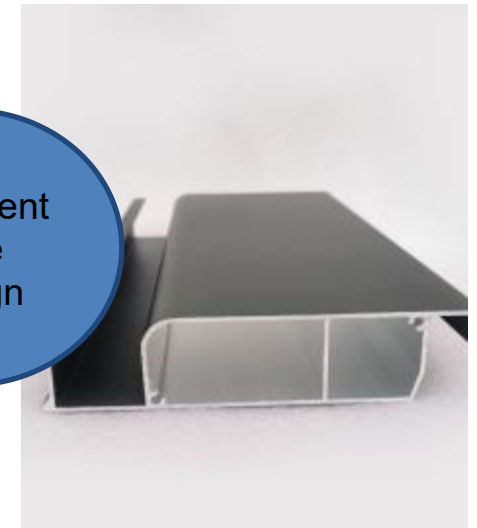

Installation is simple with modular assembly, allowing for easy completion and saving labor time.

Installation is complex, requiring on-site drilling. Even a slight mistake can result in installation failure.

Different Blade Design

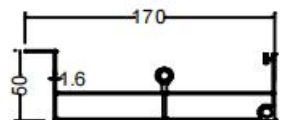

Multi-level drainage ensures rapid water going and prevents leakage.

The drainage is simple, leading to slow water going, which can easily result in a situation where "it's pouring outside, but drizzling inside."

Full Range Size Pergola to Fit your Plan

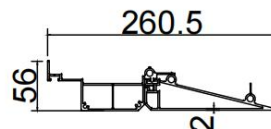

170 mm Blades :

Offers economical pricing, ideal for various settings. It accommodates widths up to 4 meters, with the roof opening 60% of the space when folded.

4 M wide

Travel distances of <6 meters

260mm Blades:

Provides a wider option, allowing roof opening of over 70% of the space. Allow the width up to 6 meters size.

4-6 M wide

Travel distances of <6 meters

300mm Blades:

Features a patented composite blade design, with a four-column structure for areas over more than 6 meters widths and length , and a travel distance of more than 6 meters.

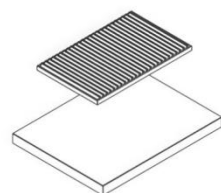

5.5-7 Wide

Travel distances of >6 meters

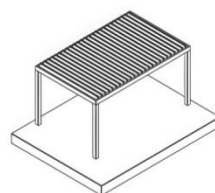

(Four-column structure supports areas >30 square meters)

Ideal for Each Single Pergola

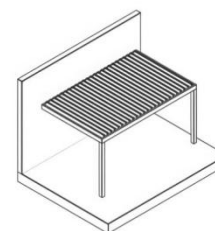

We also offer the normal adjustable Louvre Pergola featuring a tilting mechanism that allows for an adjustable angle of up to 75 degrees!
